Rajampet, Andhra Pradesh, India

Summary

Software Engineer with strong foundations in **Data Structures & Algorithms, Object-Oriented Design, Operating Systems, and Complexity Analysis**. Experienced in building **backend, scalable, and event-driven applications** using **Python, Java, FastAPI, REST APIs, Kafka, and relational databases**. Hands-on experience with **distributed systems, fault-tolerant workflows, and AI-powered applications**, with additional expertise in Generative AI, RAG, and multi-agent systems.

Education

Annamacharya Institute of Technology and Sciences, Rajampet B.Tech in Artificial Intelligence & Data Science	2024 – 2027 CGPA: 9.27/10
Sri Venkateswara College of Engineering and Technology, Chittoor Diploma in Computer Engineering	2021 – 2024 84.2%

Technical Skills

Programming: Python, Java, C, C++, JavaScript, SQL

Computer Science Fundamentals: Object-Oriented Design, Operating Systems, Algorithms, Data Structures, Complexity Analysis, Distributed Systems, DBMS, Relational Databases

Backend & Systems: FastAPI, REST APIs, Kafka, Event-Driven Architecture, Scalable Systems, Fault-Tolerant Systems, Agile Development

Databases: MySQL, PostgreSQL, H2, Relational Databases, Redis, Qdrant

AI/ML: Machine Learning, Deep Learning, PyTorch, Scikit-learn, LLMs, RAG, AI Agents, Multi-Agent Systems, Vector Search

Tools & DevOps: Git, GitHub, Docker, GitHub Actions, CI/CD

Experience

Full Stack Intern – Society for Learning Technologies (SOLETE) **May 2026 – Jul 2026**

- Contributed to full-stack application development in an **Agile environment**, integrating backend services, REST APIs, and AI capabilities into production-oriented application workflows.
- Worked across application components to develop maintainable software workflows and integrate frontend, backend, and AI services.

Software Engineering Virtual Experience – JPMorgan Chase & Co. **May 2026**

- Developed backend components integrating **Kafka, H2 Database, and REST APIs**, gaining practical experience with event-driven and distributed application architectures.
- Worked with backend services and relational data workflows in an enterprise software engineering environment.

Projects

RiskLens AI – Real-Time Financial Risk Intelligence  **Jun 2026 – Aug 2026**

- Engineered a **distributed multi-agent fraud detection platform** using Python, FastAPI, Gemini, and Google ADK for automated financial risk analysis and investigation workflows.
- Designed specialized agents for fraud detection, risk assessment, investigation, and reporting, integrating **Redis, MySQL, Qdrant vector search, and RAG** for persistent and retrieval-based data workflows.
- Implemented backend services and agent workflows designed for scalable processing and failure-aware execution across multiple application components.

CodeAtlas AI – AI-Powered Software Engineering Agent  **Jan 2026 – Mar 2026**

- Developed a **Python and FastAPI** application that analyzes GitHub repositories and generates architecture, security, and engineering insights using LLM-based code understanding.
- Implemented RAG-based retrieval and automated technical documentation using **MySQL, Next.js, and vector search** components.

Achievements

- Top 100 Finalist** – HiDevs × AI House AI Agent Builder Series 2026 National Finale.
- Top 30 Finalist** – Siddharth College National Hackathon.
- 100+ DSA Problems Solved** – LeetCode and GeeksforGeeks.
